

Online Branding

Complete search engine optimized solutions, not simply web design.

Companies that work with Virtual Protein enjoy complete online presence. Our technical and creative teams work in synergy to create the desired user experience beyond just the look and feel. We offer full-scale search engine optimized web development services, from simple static webpages to custom web programming, multi-tiered web-based application development, complex e-commerce solutions, content management systems (CMS), blog design, theming, and related communication technologies such as XML, RSS, webcasts, podcasts, and more. Our approach is to understand your business needs, envision a solution, analyze requirements, implement a complete solution, and provide user training when needed. All project details are also documented and delivered to you. Your overall online presence, including on Facebook, LinkedIn, Twitter, and others is a significant part of the SEO process. Social Media/Web 2.0 coaching is also available through our Brand-Driven Coaching program.

View an exceptional case study of how we helped a client transform his business before even the branding process was started.
